Research Papers
Scalable Byzantine Fault Tolerance via Partial Decentralization ............... 1739
Balaji Arun, Binoy Ravindran

Efficient and Error-bounded Spatiotemporal Quantile Monitoring in Edge Computing Environments 1753
Huan Li, Lanjing Yi, Bo Tang, Hua Lu, Christian S Jensen

HDPView: Differentially Private Materialized View for Exploring High Dimensional Relational Data 1766
Fumiyuki Kato, Tsubasa Takahashi, Shun Takagi, Yang Cao, Seng Pei Liew, Masatoshi Yoshikawa

Sebastian Schmidl, Phillip Wenig, Thorsten Papenbrock

Guided Exploration of Data Summaries ........................................ 1798
Brit Youngmann, Sihem Amer-yahia, Aurélien Personnaz

Facilitating Database Tuning with Hyper-Parameter Optimization: A Comprehensive Experimental Evaluation ......................... 1808
Xinyi Zhang, Zhuo Chang, Yang Li, Hong Wu, Jian Tan, Feifei Li, Bin Cui

Efficient Secure and Verifiable Location-Based Skyline Queries over Encrypted Data .................. 1822
Zuan Wang, Xiaofeng Ding, Hai Jin, Pan Zhou

AB-tree: Index for Concurrent Random Sampling and Updates ...................... 1835
Zhuoyue Zhao, Dong Xie, Feifei Li

On Repairing Timestamps for Regular Interval Time Series ..................... 1848
Chenguang Fang, Shaoxu Song, Yinan Mei

Towards Event Prediction in Temporal Graphs .................................... 1861
Wenfei Fan, Ruochun Jin, Ping Lu, Chao Tian, Ruiqi Xu

Decentralized Crowdsourcing for Human Intelligence Tasks with Efficient On-Chain Cost ............. 1875
Yihuai Liang, Yan Li, Byeong-seok Shin

Towards Distributed Bitruss Decomposition on Bipartite Graphs ................... 1889
Yue Wang, Ruiqi Xu, Xun Jian, Alexander Zhou, Lei Chen

Generalized Supervised Meta-blocking ....................................... 1902
Luca Gagliardelli, George Papadakis, Giovanni Simonini, Sonia Bergamaschi, Themis Palpanas

Your Read is Our Priority in Flash Storage ..................................... 1911
Mijin An, Soojun Im, Dawoon Jung, Sang Won Lee
New Wine in an Old Bottle: Data-aware Hash Functions for Bloom Filters

Arindam Bhattacharya, Chathur Gudesa, Amitabha Bagchi, Srikanta Bedathur

SANCUS: Staleness-Aware Communication-Avoiding Full-Graph Decentralized Training in Large-Scale Graph Neural Networks

Jingshu Peng, Zhao Chen, Yingxia Shao, Yanyan Shen, Lei Chen, Jiannong Cao

CORE: a COMplex event Recognition Engine

Marco Bucchi, Alejandro Grez, Andres F Quintana, Cristian Riveros, Stijn Vansummeren

TAOBench: An End-to-End Benchmark for Social Networking Workloads

Audrey Cheng, Xiao Shi, Aaron N Kabcenell, Shilpa Lawande, Hamza Qadeer, Jason Chan, Harrison Tin, Ryan Zhao, Peter Bailis, Mahesh Balakrishnan, Nathan Bronson, Natacha Crooks, Ion Stoica

LETTER FROM THE EDITORS IN CHIEF

We are very pleased to present the ninth issue of the Proceedings of the VLDB (PVLDB) Volume 15. PVLDB publishes research in the area of database and information system technology. Together with expert boards of associate editors and reviewers, submissions are carefully peer-reviewed, often entering a revision phase, then published in the journal and ultimately presented at the following VLDB conference. We are very grateful to all colleagues who contribute to the success of PVLDB.

This issue includes eighteen papers covering a broad range of topics, including blockchains, privacy-preserving analytics, exploratory data analysis, spatial and temporal analytics, systems, graph mining, anomaly detection, indexing, event recognition, crowdsourcing, graph neural networks.

Arun and Ravindran propose a new approach for designing Byzantine Fault-Tolerant (BFT) consensus protocols that aims to improve their efficiency. Liang et al. proposed the use of blockchains to support cryptocurrency payments and serve as a trustworthy judge to resolve disputes between a worker and a requester in a decentralized setting. They provide formal definitions for decentralized human intelligence tasks and prove that their construction prevents false-reporting and free-riding.

Li et al. address the problem of quantile computation for spatiotemporal data in IoT applications; they propose an approach that is efficient and supports bounded errors. Fang et al. formalize the problem of timestamp repair and propose exact and approximate algorithms to address the problem; their approach is implemented as a function available in the open-source Apache IoTDB.

Kato et al. introduce new techniques that enable the exploration of high-dimensional sensitive data while preserving privacy. Wang et al. consider the problem of supporting secure and verifiable location-based skyline queries over encrypted data and propose an efficient approach to support these queries.

Zhao et al. introduce AB-tree, a new index that supports highly concurrent random sampling and update operations to support approximate queries. Bhattacharya et al. introduce Projection Hash Bloom Filter (PHBF), a space-efficient partitioned Bloom filter which uses random projection based data-aware hash functions. They provide both a theoretical analysis and experimental evaluation of their approach.

To avoid read stalls in DBMS buffers, An et al. propose a fused read and write as a new storage interface.

Bucchi et al. introduce CEQL, a functional query language designed to recognize complex events and present its implementation in the COmplex event Recognition Engine (CORE). They show, through an experimental evaluation, that CORE outperforms existing systems by one to five orders of magnitude in throughput on different query workloads. Fan et al. address the problem of event prediction; they propose the use of temporal association rules to enrich event prediction models with temporal conditions.

Wang et al. propose distributed algorithms for bitruss decomposition and experimentally show that their methods are able to handle graphs with 30 trillion butterflies in 2.5 hours, while existing parallel methods under shared-memory model fail to scale to such large graphs. Peng et al. consider the problem of how to efficiently train graph neural networks (GNNs) and propose SANCUS, a staleness-aware communication-avoiding decentralized GNN system.

Cheng et al. present TAOBench, an open-source benchmark that captures the social graph workload at Meta and that accurately simulates the production request patterns of an online social network. They demonstrate the usefulness of the benchmark through an evaluation of distributed data stores.

Schmidl et al. carry out a detailed evaluation of 71 anomaly detection algorithms over 976 datasets; besides an overview of the techniques, they experimentally compare their effectiveness, efficiency, and robustness. Zhang et al. perform a comprehensive evaluation of database configuration tuning techniques and argue that hyper-parameter optimization algorithms, developed for machine learning applications, can be used to further enhance the database configuration tuning.

Youngmann et al. study the problem of data summarization in the context of exploratory data analysis. Instead of producing a single summary, they adopt a divide-and-conquer approach to produce a connected set of summaries. They propose EDA4Sum which aims to find a sequence of summaries whose cumulated utility is maximized.
Inspired by a real-world application to deduplicate a legacy customer database containing ~7.5 million entries, Gagliardelli et al. propose to reduce the computational cost of entity resolution by extending the idea of supervised meta-blocking. Their experimental evaluation demonstrates that their approach outperforms prior state of the art and that it is also scalable.

The following papers received the PVLDB Artifacts Available badge and made available the code/data used in the results they reported: Gagliardelli et al.; An et al.; Peng et al.; Bucchi et al.; Cheng et al., Fang et al., Arun and Ravindran; Li et al.; Schmidl et al.; Youngmann et al.; Zhang et al.; Zhao et al.;

All papers will be presented at the 2022 Conference on Very Large Databases (VLDB 2022) in Sydney, Australia. We hope you enjoy reading this issue and look forward to seeing you in Sydney!
