Research Papers

Cryptographically Secure Private Record Linkage Using Locality-Sensitive Hashing.........................................................79
Ruidi Wei, Florian Kerschbaum

Language Models Enable Simple Systems for Generating Structured Views of Heterogeneous Data Lakes 92
Simran Arora, Brandon Yang, Sabri Eyuboglu, Avanika Narayan, Andrew Hojel, Immanuel Trummer, Christopher Re

Query Refinement for Diversity Constraint Satisfaction ...........................................................................................................106
Jinyang Li, Yuval Moskovitch, Julia Stoyanovich, H. V. Jagadish

ElasticNotebook: Enabling Live Migration for Computational Notebooks ............................................................................ 119
Zhaoheng Li, Pranav Gor, Rahul Prabhu, Hui Yu, Yuzhou Mao, Yongjoo Park

Breathing New Life into An Old Tree: Resolving Logging Dilemma of $B^\pm$-tree on Modern Computational Storage Drives ...........................................................................................................134
Kecheng Huang, Zhaoyan Shen, Zili Shao, Tong Zhang, Feng Chen

An Empirical Evaluation of Columnar Storage Formats ...........................................................................................................148
Xinyu Zeng, Yulong Hui, Jiahong Shen, Andrew Pavlo, Wes Mckinney, Huanchen Zhang

Everest: GPU-Accelerated System For Mining Temporal Motifs .......................................................................................... 162
Yichao Yuan, Haojie Ye, Sanketh Vedula, Wynn M Kaza, Nishil Talati

Billion-Scale Bipartite Graph Embedding: A Global-Local Induced Approach ........................................................................ 175
Xueyi Wu, Yuanyuan Xu, Wenjie Zhang, Ying Zhang

Utility-aware Payment Channel Network Rebalance ................................................................................................................ 184
Wangze Ni, Pengze Chen, Lei Chen, Peng Cheng, Chen Zhang, Xuemin Lin

ALECE: An Attention-based Learned Cardinality Estimator for SPJ Queries on Dynamic Workloads ........................... 197
Pengfei Li, Wening Wei, Rong Zhu, Bolin Ding, Jingren Zhou, Hua Lu

Flash-LLM: Enabling Low-Cost and Highly-Efficient Large Generative Model Inference With Unstructured Sparsity .....................................................................................................................211
Haojun Xia, Zhen Zheng, Yuchao Li, Donglin Zhuang, Zhongzhu Zhou, Xiafei Qiu, Yong Li, Wei Lin, Shuaiwen Leon Song

Confidential Consortium Framework: Secure Multiparty Applications with Confidentiality, Integrity, and High Availability ...................................................................................................................225
Heidi Howard, Fritz Alder, Edward Ashton, Amaury Chamayou, Sylvan Clebsch, Manuel Costa, Antoine Delignat-Lavaud, Cedric Fournet, Andrew Jeffery, Matthew Kerner, Fotios Kounelis, Markus A. Kuppe, Julien Maffre, Mark Russinovich, Christoph M. Wintersteiger

VeLP: Vehicle Loading Plan Learning from Human Behavior in Nationwide Logistics System ...........................................241
Sijing Duan, Feng Lyu, Xin Zhu, Yi Ding, Haotian Wang, Desheng Zhang, Xue Liu, Yaoxue Zhang, Ju Ren
Relational Query Synthesis ⊖ Decision Tree Learning

LETTER FROM THE EDITORS IN CHIEF

It is our pleasure to present the second issue of Volume 17 of PVLDB (Proceedings of the VLDB). PVLDB is dedicated to showcasing original research papers that encompass a wide spectrum of subjects within the realm of data and information management. Our coverage spans from fundamental theoretical principles and cutting-edge system architectures to innovative models, techniques, novel applications, and the comprehensive assessment and deployment of large-scale solutions. In our research track, we feature four equally significant categories of papers: (a) regular research, (b) scalable data science (SDS), (c) experiment, analysis & benchmark (EA&B), and (d) vision papers.

The second issue of PVLDB's Volume 17 includes 14 papers, spanning the topics of AI/ML and databases, data privacy and security, graph and network data, database engines, novel database architectures, data models and query languages, as well as ethical data management. Several topics stood out, the most popular ones in this issue: AI/ML and databases (4 papers), data privacy and security (3 papers), and graph and network Data (2 papers).

Out of the 14 papers, two papers are in the scalable data science category, one is in the experiment, analysis & benchmark category, and the rest are regular research papers. All 14 papers were accepted after revision.

PVLDB is committed to providing valuable and constructive feedback through a rigorous review process. All submissions undergo meticulous peer review by a team of accomplished Associate Editors and dedicated reviewers. Each paper receives comprehensive evaluation from a minimum of three reviewers, along with the oversight of an Associate Editor. During a three-week discussion phase, reviewers engage in a thorough exchange of perspectives, ultimately converging on a consensus, which is summarized in a meta-review. Some submissions may proceed to a revision phase, affording authors a three-month window to refine their work for subsequent review cycles.

This issue is the result of all the work put in by the authors as well as the great commitment and effort of our associate editors and reviewers as well as our proceedings chairs.

Meihui Zhang and Cyrus Shahabi
Editors-in-Chief of PVLDB Vol. 17
Program Chairs for VLDB 2024
